

Introduction to Artificial Intelligence

Artificial Intelligence (AI) is the simulation of human intelligence by machines. AI systems can learn from data, reason, solve problems, and support decision making.

Machine Learning

Machine Learning is a subset of AI where algorithms learn patterns from data.

Retrieval-Augmented Generation (RAG)

RAG retrieves relevant information from documents before sending context to a Large Language Model. This improves answer quality and reduces hallucinations.

LangChain Components

Document Loaders, Text Splitters, Embeddings, Vector Stores (FAISS/Chroma), Retrievers, and LLMs work together to build a RAG application.
